Remarks

This product is pasteurized, which means that vegetative microorganisms have been inactivated.

Spores however can survive a pasteurization. This will not cause a problem in our product if kept at storage conditions as indicated on our specification.

The formation of agglomerates (crystals) is a natural phenomenon in concentrated fruit juices. It can be triggered by fluctuations in storage conditions. The crystals disappear upon gently heating and stirring the juice concentrate. This phenomenon has no effect on the quality of the product.

It remains the responsibility of the customer to ensure that the use of the product and subsequent labelling is in compliance with relevant legislation.

The product that SVZ International B.V. supplies is not intended for direct consumption.
